

# Installing python packages

## Step 1: Open the anaconda navigator in terminal

## Step 2: open the CMD.exe prompt and install necessary packages

The image shows the Anaconda Navigator application interface. On the left is a sidebar with navigation options: Home, Environments, Learning, and Community. Below these are links for Documentation and Anaconda Blog, along with social media icons for Twitter, YouTube, and GitHub. The main area displays an Anaconda Prompt terminal window titled 'Anaconda Prompt (anaconda3)'. The terminal shows the following commands and output:

```

At the bottom of the terminal window, there are four informational boxes:

- Run a Powershell terminal with your current environment from Navigator activated
- PyQt GUI that supports inline figures, proper multiline editing with syntax highlighting, graphical calltips, and more.
- Scientific Python Development Environment. Powerful Python IDE with advanced editing, interactive testing,
- Streamlined code editor with support for development operations like debugging, task running and version controls
